Project Title: Coffeeshop

Michely Cange, mcange@students.stonehill.edu

Anna Proscia, aproscia@students.stonehill.edu

Github Repository: <https://github.com/akproscia/Web-Programming-Project>

Project Description

Our website is a social media platform focused on sharing and discovering entertainment with and through your friends. Users can create personal profiles where they recommend their favorite movies, songs, games, and other media.

Each user will have a profile that reflects their interests and allows them to post recommendations for others to see. The platform will make it easy to explore new content based on what other users are sharing. In addition, the website will include social networking features that allow users to connect with their friends. Users can follow others, view their profiles, and see their recommendations. The application is designed for anyone who enjoys sharing their interests and finding new movies or music in a more interactive and personalized way.

Background and Motivation

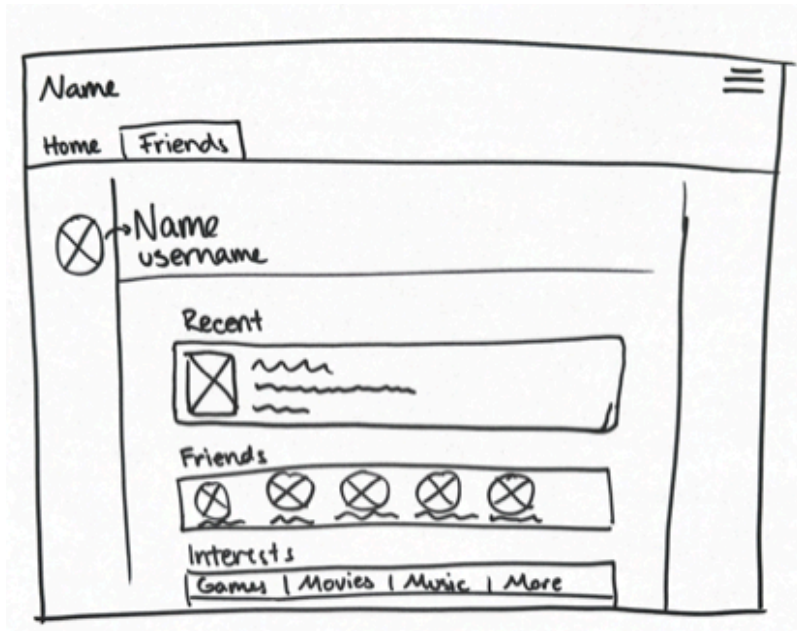

Our project is inspired by applications like Letterboxd and Airbuds, both of which focus on sharing and viewing your friend's current interests, and allow users to follow their friends.

While our platform is inspired by the idea of sharing recommendations with other users, it differs by allowing users to recommend not only just movies or music, but also other types of media, all in one place. In addition, our website will include features for building a personalized profile that reflects each user's interests.

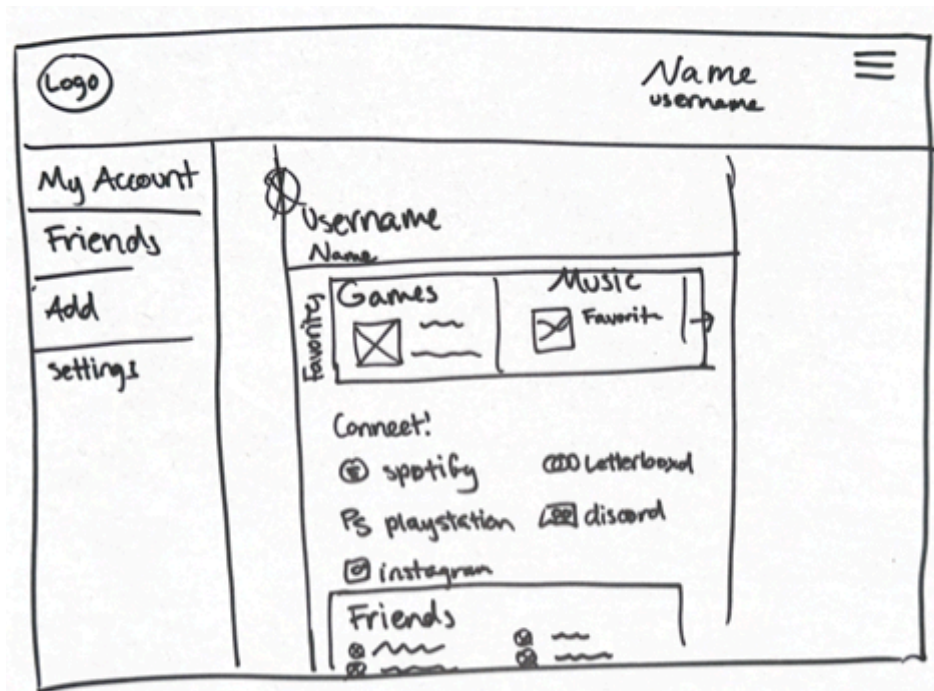

Letterboxd, Spotify, and Goodreads are great resources for seeing what your friends are up to, but there are so many applications for different types of media that it's easy to get lost and miss out on what your friends are up to. The goal of our website is to solve this problem by creating a simple, user-friendly environment for people to share their current interests all in one place, while including links to those external applications. We chose the name Coffeeshop because

(among our friends) coffee shops are the default location to meet and catch up, and the goal of our website is to build that sort of bridge between friends.

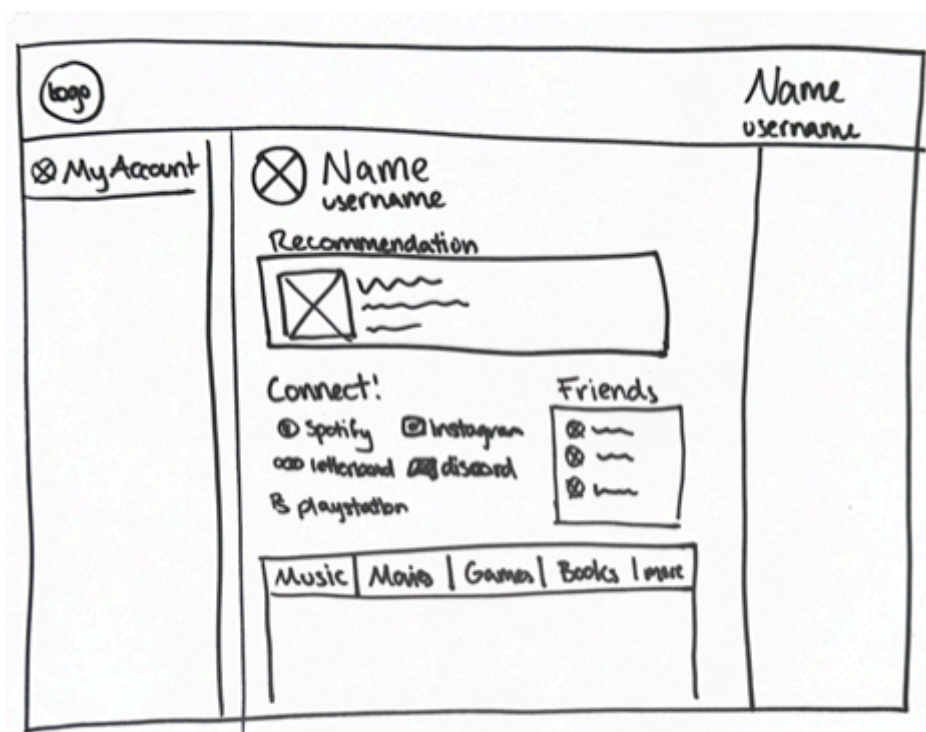

Wireframes and Prototyping

Prototype 1.0 – Profile

Prototype 1.1 – Profile

Prototype 1.2 – Profile

A hand-drawn sketch of a login page for a coffee shop. The page has a header bar with a circular icon and the text "Coffee shop". Below the header, the word "Login" is centered. There are two input fields: the first is labeled "Username" and the second is labeled "password". Below the password field, there is a link that says "Don't have an account? Register Here!".

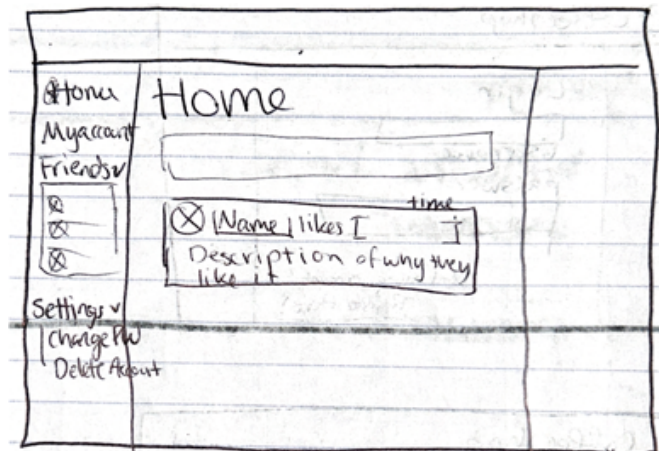

Prototype 2.0 – Login Page

A hand-drawn sketch of a register page for a coffee shop. The page has a header bar with a circular icon containing an 'X' and the text "Coffee shop". Below the header, the word "Register" is centered. There are four input fields: the first is labeled "Display Name:", the second is labeled "Username:", the third is labeled "password:", and the fourth is labeled "Pw (again):".

Prototype 3.0 – Register Page

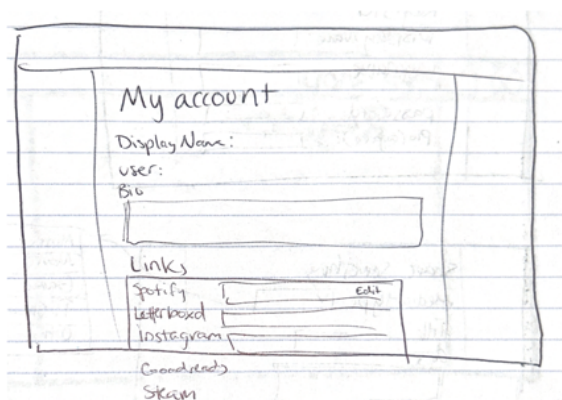

Prototypes 2.1 and 3.1 – Login and Register Pages (Top to bottom)

Prototype 4.0 – Home Page

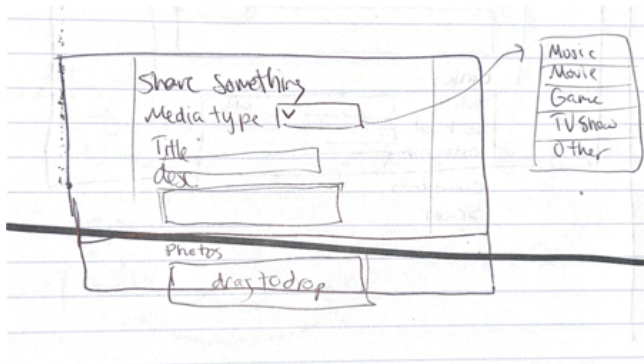

Prototype 4.1 – Home Page

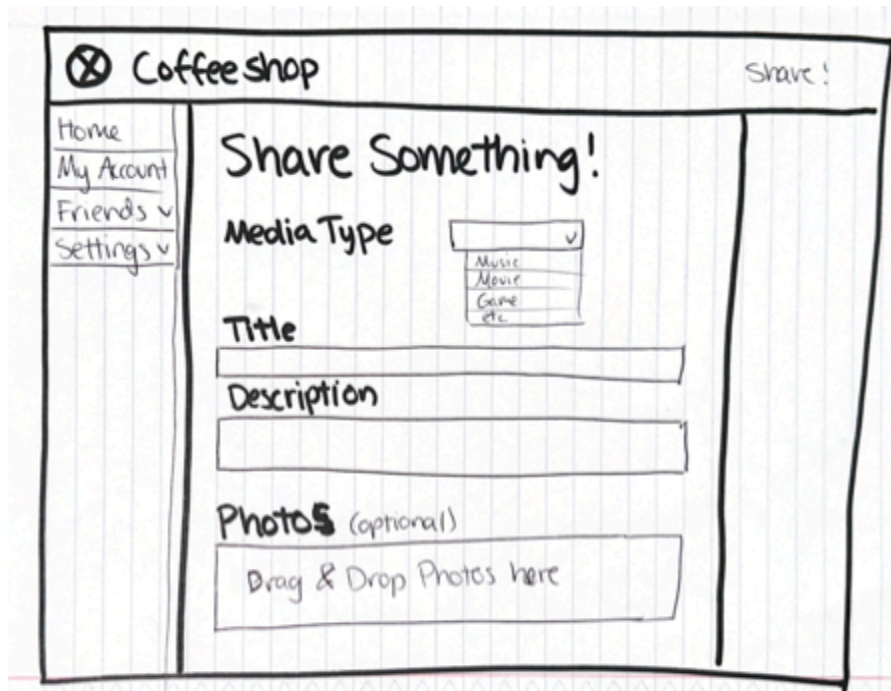

Prototype 5.0 – My Account Page

Prototype 5.1 – My Account Page

Prototype 6.0 – New Post Page (apologies for the sharpie bleedthrough).

Prototype 6.1 – New Post Page

Description of Wireframes/Prototypes:

1.0 - 1.2 – The first three prototypes were of the profile page from another user’s perspective. It shows the user’s name, username, profile picture, most recent recommendation, and links to external sites. Through the process, we moved the “friends” section to sit in line with the “Connect” section, creating a smoother and more modern look. This page includes basic user information including name, username and profile picture, their most recent post/recommendation, links to the user’s linked accounts, a list of the user’s friends, and an archive of the user’s past posts, as well as the navigation bar on the left side and the website heading.

2.0 - 2.1, 3.0 - 3.1 – The prototypes for both the login and register pages. Not much changed between the original and updated designs, except that we added a place to drag and drop a profile picture in Prototype 2.1.

4.0 - 4.1 – The biggest change between the original and final designs for the home page was the addition of a comment section onto the posts from friends. Allowing users to comment on each

other's posts will further the sense of community we are trying to create with this site. We also added the tag for media type on top of the post, for easier viewability.

5.0 - 5.1 –The only change between the original and final designs for the “My Account” page was the addition of the “Past Recs” section (also seen in Prototype 1.2 on the “Profile” page), which shows the archive of user's past recommendations.

6.0 - 6.1 – We didn't make any changes to the New Post page from the original to the final draft. The page features a dropdown menu where users select the media type they are posting about, the title of their post, and their description for comments on it, as well as an optional place to add photos.

Must-Have Features

Our website will require:

- Secure user authentication, allowing users to register, log in, and log out of their accounts.
- Users will have a profile where their name, username, profile picture, and interests will be viewable to others.
 - Profile pictures will be chosen from a provided selection for simplicity.
- We will need [data files on the backend \(JSON files\)](#) to store user information, including
 - Display names
 - Usernames
 - Profile pictures ([selected from a list of options](#))
 - Login credentials
 - Post history
 - List of user's 'friends'
 - User's interests
- [Users must be able to add, edit, and delete their posts/recommendations, which will be stored in and retrieved from the data files.](#)
- The data files on the backend must also store comments left on posts.
- Front-end requirements include a profile page (for users to view other profiles), a home page, login and registration pages, a new post page, a page for users to view and edit their own account information, and password reset without authorization and delete account pages.

Optional Features

Some possible optional features we discussed include: the option to set some activity to be only viewable to friends, the ability to be recommended users with similar interests, and the ability to “follow” a friend on a specific topic (i.e., get alerted when they post about a specific type of media). We could also add a place for users to request that we add features or other types of media.

Project Schedule

February 20 - March 6

- Complete wireframes and frontend layout plan (Anna)
- Set up MERN project structure and database (Michely)
- Create basic registration/login pages (Both)

March 7 - March 22

- Implement media addition functionality (Anna)
- Implement friend feature (Anna)
- Build profile page layout (Michely)
- Connect frontend to backend (Michely)

March 23 - April 3 (Milestone)

- Display username, profile picture, and name (Michely)
- Display media on profile (Anna)

April 4 - April 19

- Building settings aspect (Both)
- Improve styling and test features (Both)

April 20 - May 1

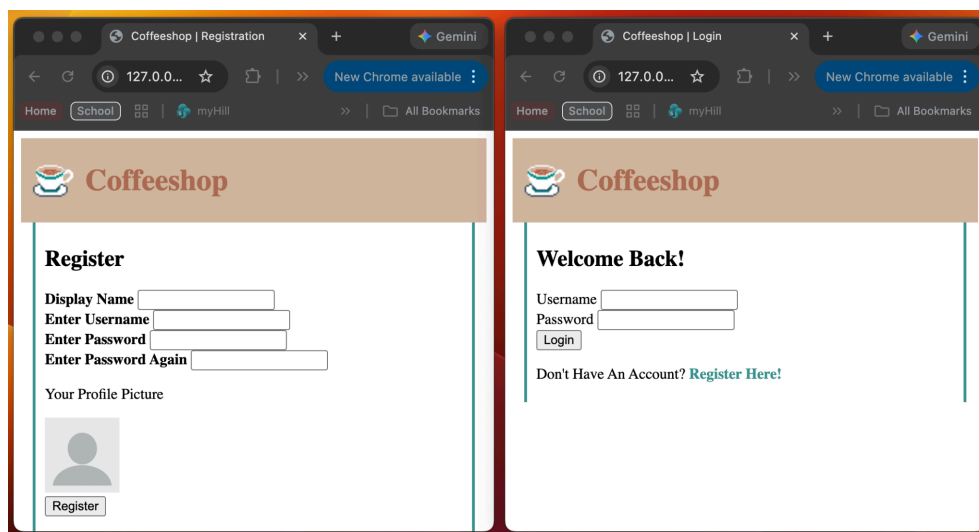

- Prepare walkthrough video (Both)
- Make final edits to the website (Both)
- Final Testing (Both)

Design Process

So far, we have been working on the profile, login, and registration page. The login page and registration page are similar to prototypes 2.1 and 3.1, except for some design/layout choices. In

the pages we have designed so far, we moved the navigation bar from the left side to the top, which we preferred for aesthetic reasons.

Our current login page, asks the user for their username and password. It also includes a link on the page that will bring the user to the registration page. The current registration page also asks for the same inputs as the prototype, along with a link to bring already registered users to the login page. The only difference is that we used a default blank profile page instead of having the user select a picture. We did this just so we could start creating our pages, and later on we may add the option for the user to pick between a selection of other pictures. The user will first see the login page, if they are a new user they can click a link on the page that will redirect them to the registration page. After entering their information from either the registration or login page, they will then be sent to their profile page.

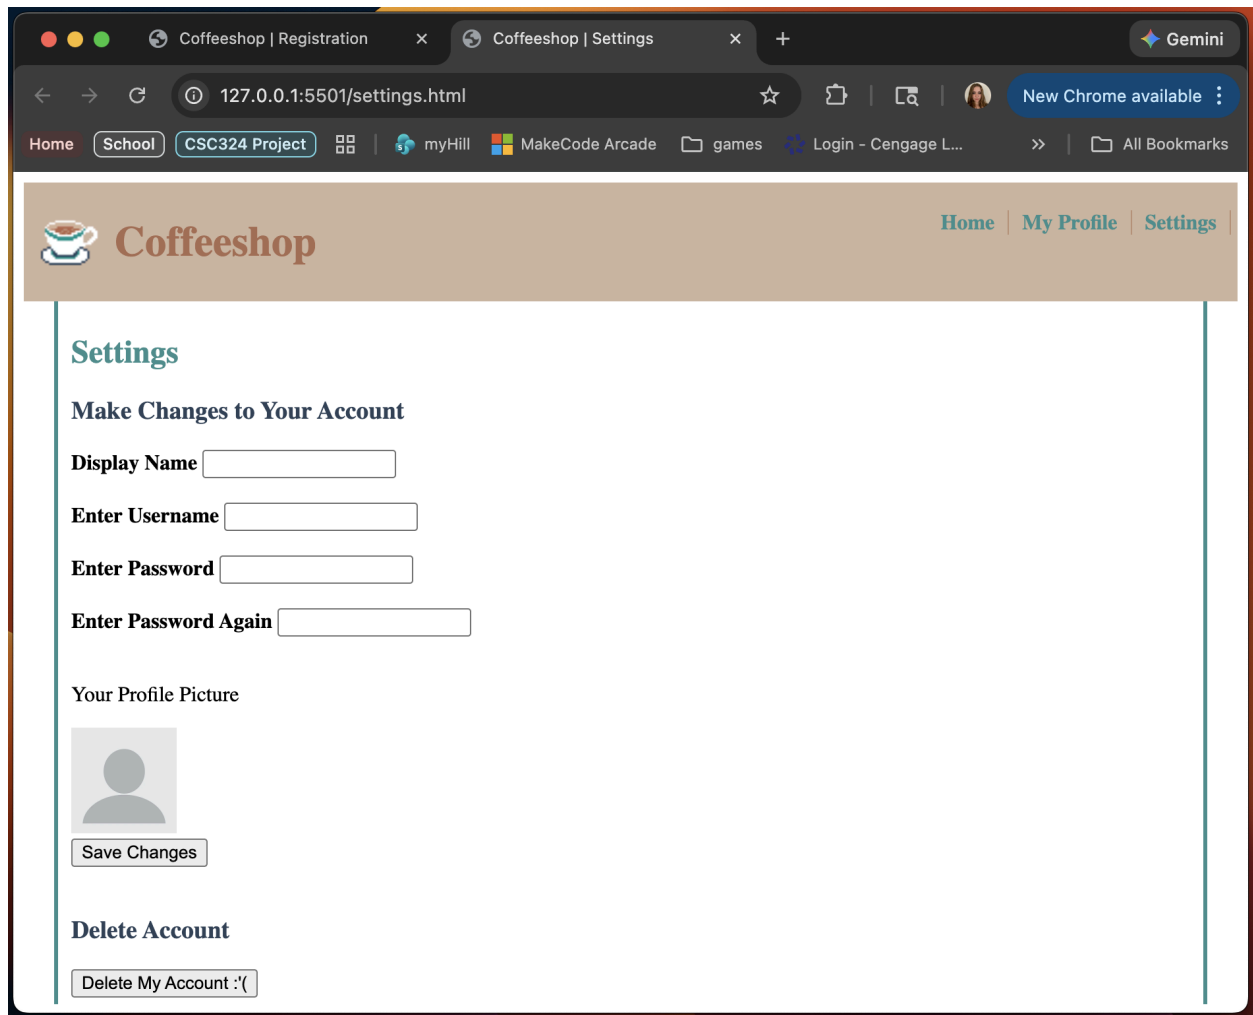

Registration Page & Login Page

For the home page and setting page, we don't have many features on them yet. When you are on the profile page, there are three links on the top of the right page that can bring the user to their settings, profile, or home.

The profile page is mostly similar to prototype 5.1. They both display a username, display name, friends, links to Spotify, etc. We also have a generic box on the bottom of the screen that may act as a user bio. The friends section would still allow the user to view their friends profile. The main difference from the prototype and our current page is the layout and style difference. We are still working on a way to make everything look nice on the screen, so we can then add the other things such as a "past recs" section.

Two major things that changed through the course of this project were the "My Account" and "Settings" pages. Initially, the "My Account" page allowed a user to view and edit their own

account directly from that page. We realized that moving and allowing the user to access these changes from settings would be easier to implement and more straightforward for users, because they will be able to change their password and display name, username, etc. in the same place.

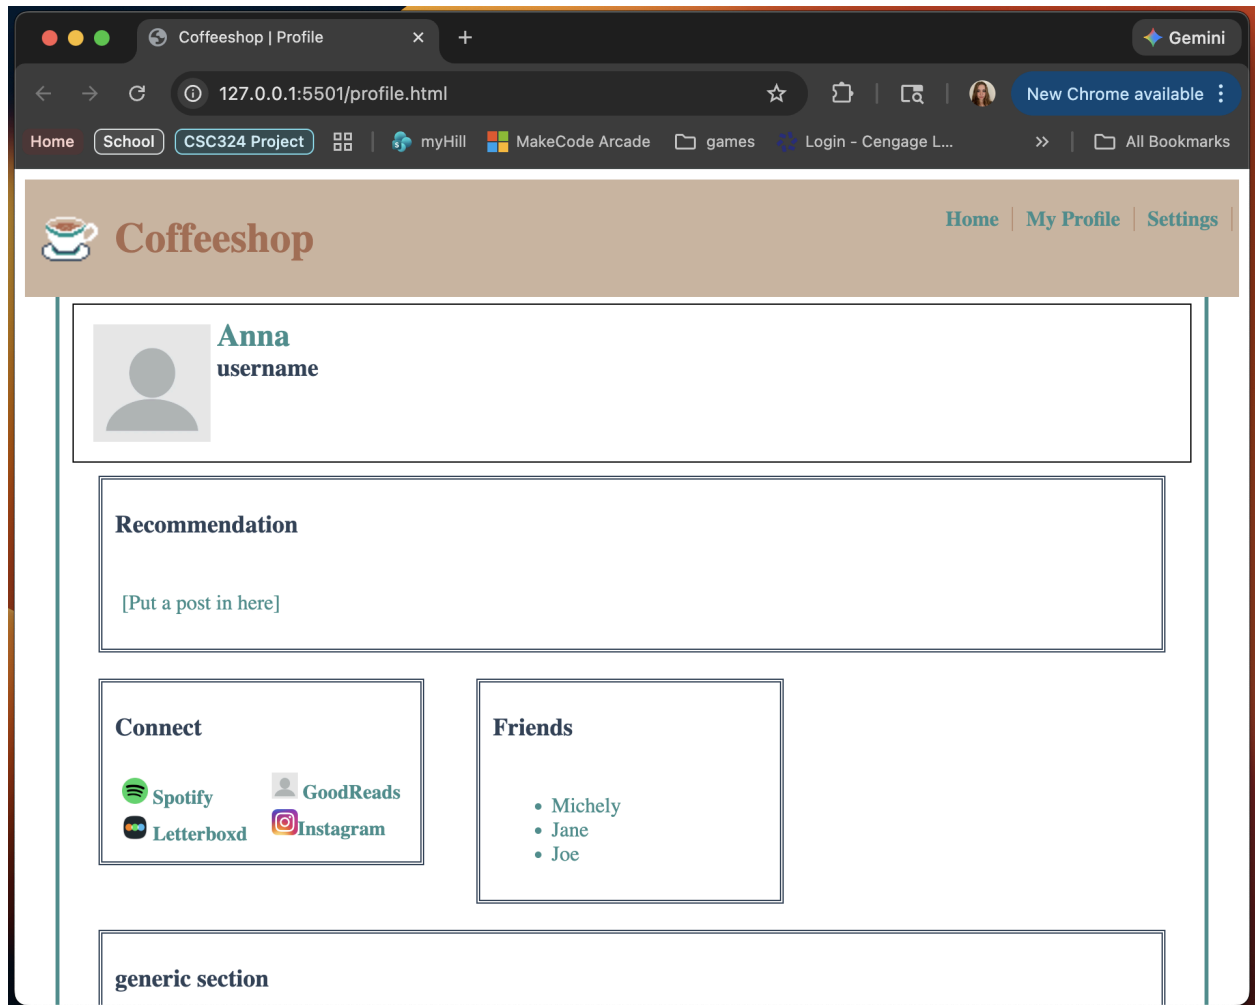

The screenshot shows a web browser window with two tabs: "Coffeeshop | Registration" and "Coffeeshop | Settings". The address bar shows the URL "127.0.0.1:5501/settings.html". The browser's bookmark bar includes "Home", "School", "CSC324 Project", "myHill", "MakeCode Arcade", "games", "Login - Cengage L...", and "All Bookmarks".

The page header for "Coffeeshop" features a coffee cup icon and navigation links for "Home", "My Profile", and "Settings". The "Settings" page is titled "Settings" and contains the following sections:

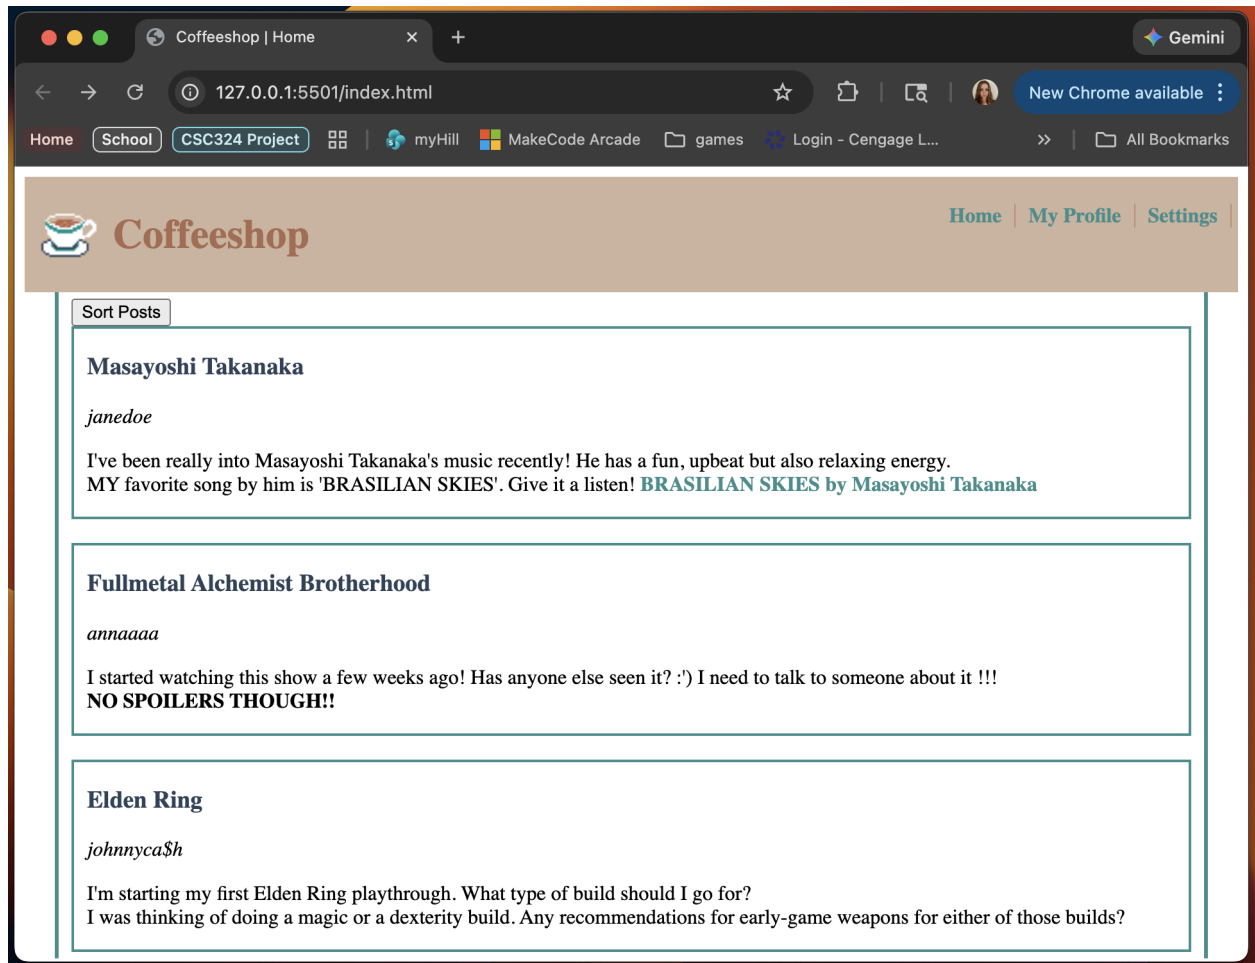

- Make Changes to Your Account**
 - Display Name
 - Enter Username
 - Enter Password
 - Enter Password Again
- Your Profile Picture**
 - A placeholder image for a profile picture.
 - A "Save Changes" button.
- Delete Account**
 - A "Delete My Account :{'" data-bbox="116 165 883 645"/>

Settings Page

Also, our settings page was initially linked in the side bar navigation, but we moved it to be its own page.

Profile Page

Home Page
